

SyncBack

SyncBack is the preference panel that automatically restart an application after execution of HotSync. – an application that is running before HotSync start or you can specify the application yourself.

This application works with **PalmOS 3.5** or later device.

You can download it from [here](#).

Installation

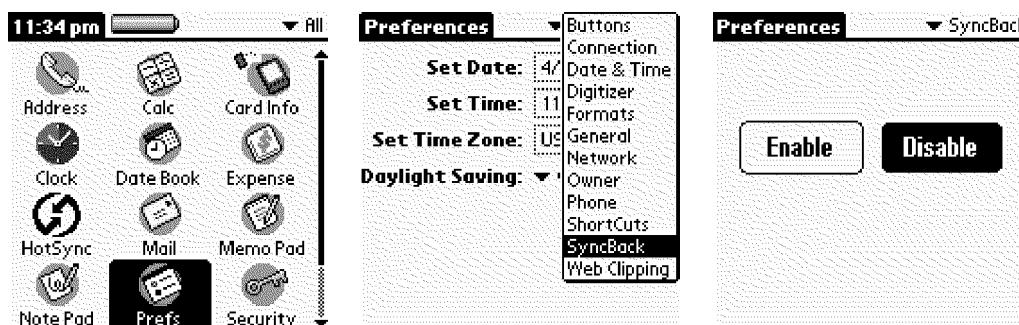

Download SyncBack12.zip from above link, unzip it and install SyncBack.prc into your palm device.

Uninstallation

Before you uninstall SyncBack be sure to disable it. On OS4.0 or later, you do not need to care about it – just delete it.

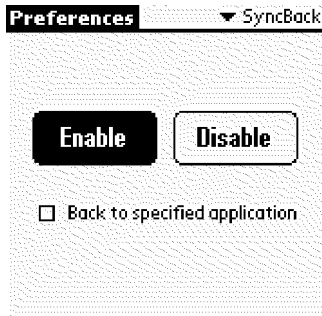

Usage

You can not find out an ICON for SyncBack at Launcher. SyncBack is a preference panel. First, tap Prefs application and select SyncBack from a popup list at upper-right. By default, [Disable] is selected and SyncBack is not functional.

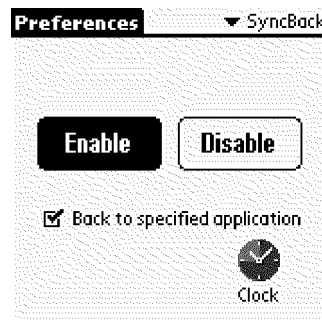

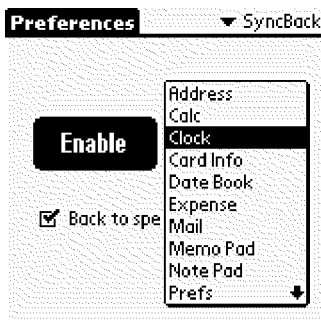

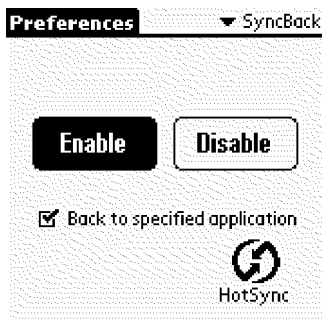

Tapping [Enable] button and an application that is running before HotSync automatically restart after HotSync execution.

SyncBack

Check [Back to specified application] checkbox and you can specify the restart application after HotSync. You can change the application by tapping application ICON.

SyncBack will work on PalmOS 5.0

History

Version 1.2 2002/04/18 Recover setting after soft reset

Version 1.1 2002/04/16 Used 4.0API. Replace it and now support OS3.5 devices

Version 1.0 2002/04/15 First Release
